### AnteAGE Microneedling Results

### What is Microneedling?

Microneedling (known as Collagen Induction Therapy) creates tiny channels in the skin, stimulating your own natural healing response, encouraging the growth of new collagen and elastin, and restoring your skin to a naturally youthful glow.

### Why Stem Cell Microneedling?

Bone Marrow Stem Cells control healing in the skin. As we age, our healing stem cells die off, reducing the ability to repair everyday damage. AnteAGE® restores the regenerative power of bone marrow stem cells to heal damage without inflammation and support skin health.

By combining Microneedling with the incredible reparative and rejuvenating properties of AnteAGE Stem Cell growth factor products we are able to enhance the benefits of Microneedling, minimize downtime, and reveal smoother, tighter, more youthful looking skin.
