

## Post Pellet Implant Procedure Guidelines

- Discontinue all anti inflammatory medicine, aspirin and any substances that promotes bleeding (ie garlic, fish oils ect.) 3 days before procedure.
- After the procedure you may take extra strength Tylenol for pain or discomfort.
- Applying an ice pack to treated area is encouraged for a day after if pain and bleeding are present.
- Leave bandages on for at least 2 days. There may be some bleeding underneath which is normal. Bandages may be removed after day 2 or 3. Make sure to wash with soap and water and apply another clean band aid over incision. If site of incision has not closed by day 3 please call the office at 808-575-2328.

If there is any redness around the incision site with significant pain, swelling, warmth, oozing of blood or other fluid please call the office.
